

# Veritas NetBackup 8.1.1

## Top Reasons to Upgrade.

### BETTER CLOUD BACKUPS

Only NetBackup™ delivers choice and confidence to the multi-cloud with 40+ **certified** public cloud connectors. With NetBackup™ CloudCatalyst, backups to the cloud are deduplicated with the fastest performance in the industry, dramatically reducing the time and cost associated with cloud storage and eliminating the need for 3rd party cloud gateways.

### PROTECT MODERN NEXT-GEN WORKLOADS

Whether it's Big Data, Hyperconverged, or Open Source, NetBackup has you covered. Keep pace with multi-petabyte workloads like Hadoop and NoSQL, and hyperconverged workloads like VDI with Nutanix, with NetBackup™ Parallel Streaming and its agentless, on-demand flexibility and dynamic scale-out performance. And with NetBackup™ appliance Universal Share, any data can be copied directly to an Appliance, saving production storage space and eliminating double data moves.

### RECOVER ORACLE INSTANTLY

NetBackup™ Copilot delivers instant recovery capabilities as-a-service with complete visibility and control into any Oracle® database environment. Recover a 10 terabyte database in as little as 10 minutes.

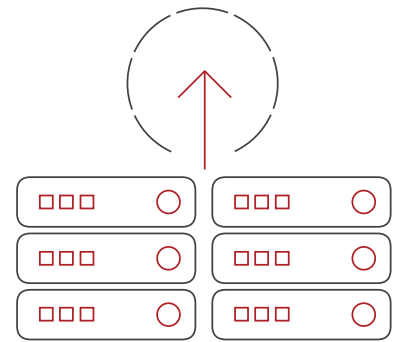

### PROTECT ISILON FASTER

Modern filers can easily store petabytes of data. With NetBackup™ Accelerator, you can back up Dell EMC Isilon filers up to 50% faster as only block-level changes are copied and full backups are eliminated

## BUILD RESILIENT, FLEXIBLE BACKUP INFRASTRUCTURE WITH NETBACKUP APPLIANCES

From the data center, to remote office, to multi-cloud, Veritas is the only vendor to offer active-active, highly available, integrated appliances that deliver zero downtime, can scale to 1.9 petabytes and can improve performance as much as 80% over the competition. And with NetBackup™ Virtual Appliances for both the Remote Office and now the Data Center, never has there been more deployment options to build out the “right for me” data protection infrastructure.

## INTEGRATE WITH THIRD-PARTY TOOLS

With the new NetBackup RestAPI, you can integrate with other enterprise tools such as ServiceNow® or BMC® Remedy to facilitate trouble ticket creation and customized alerting. You could even build your own console using third party tools, making it easy for front-line staff to perform simple tasks such as file or virtual machine restores.

## MANAGE MORE HARDWARE SNAPSHOTS

NetBackup now integrates with Veritas CloudPoint™, enabling NetBackup to orchestrate hardware snapshots for a wider variety of platforms such as those from Hewlett Packard Enterprise, Hitachi Data Systems, and Pure Storage. Much simpler than scripting or native tools, NetBackup can now integrate these snapshots into your overall data protection strategy.
