

DXC Managed Services for Virtual Private Cloud and Veritas NetBackup Software Integration

Joint solution brief

Software and services integration accelerates savings.

Veritas and DXC have a proven, longstanding partnership that reliably delivers a range of powerful capabilities for use across physical, virtual and cloud environments. Veritas NetBackup™ software integration with DXC Cloud and Platform Services is a prime example of a joint solution that enables a range of benefits for enterprise users.

As the world's leading independent, end-to-end IT services company, DXC serves nearly 6,000 private and public sector enterprises across 70 countries. No matter where you are in your digital journey, DXC can help you create a strategy and then design and deliver the right solutions to realize:

- New business innovations
- Better customer experiences
- Improved process efficiencies
- Greater cost reductions to increase business value

ABOUT DXC AND VERITAS

[DXC Cloud and Platform Services](#) is one of nine families of services the company offers. Cloud and Platform Services help clients maximize their private cloud, public cloud and legacy infrastructure, as well as securely manage their hybrid environments. One important aspect of DXC Cloud and Platform Services is their ability to work with a wide range of partners across a broad spectrum of solutions and are able to create the best fit for every client's unique needs. For clients that require an industry-leading data backup and management solution, Veritas is the clear choice of partner.

Designed specifically for the diverse challenges of the enterprise, Veritas [NetBackup](#) protects data wherever it lives—on-premises in data centers and remote sites or off-premises in the cloud. Hardware and platform agnostic, NetBackup is fully compatible with all the leading appliances and storage devices and all the leading private and public cloud providers. NetBackup is an ideal fit with DXC Managed Services for Virtual Private Cloud (VPC) offer.

CUSTOMER BENEFITS

- Utility/consumption model means you pay only for the amount of data protected each month.
- Count on fast and easy system recovery in the event of a disaster.
- Increase visibility into your data to generate greater insights to drive business value.
- Eliminate the complexity of point solutions and infrastructure management.
- Reduce the cost of storing and replicating data.
- Reduce data transmission costs: Deduplication and compression can cut time requirements by up to 95%.
- Improve productivity through centralized, policy based management.
- Address General Data Protection Regulation (GDPR) and other compliance requirements with confidence, when deployed in conjunction with the Veritas 360 Data Management portfolio.

WHY CHOOSE VERITAS AND DXC MANAGED SERVICES FOR VPC

NetBackup seamlessly integrates with the hardware platform of your choice. Once installed and configured, NetBackup can manage all backups to deliver:

- Replication
- Deduplication
- Direct tape creation
- Veritas Accelerator support
- VMware Instant Recovery

TURN BACKUP AND ARCHIVING FROM BURDENSOME EXPENSE INTO DRIVER OF VALUE

When you rely on DXC to deliver comprehensive VPC services, you immediately benefit from a monthly, consumption-based OpEx model that essentially eliminates the need for CapEx outlays in support of your cloud transformation.

One of the biggest advantages of NetBackup in combination with DXC VPC is our ability to provide greater visibility into backup data, which enables greater insight into how best to store and manage that data for even more OpEx savings.

FEATURES AND CAPABILITIES

Powerful: Your backup data is kept safe and free of duplicates. DXC Managed Services for VPC and Veritas NetBackup deliver fast and simultaneous backup and restore from disk with advanced deduplication technology and secure replication to drastically reduce complexity.

Fast: NetBackup Accelerator technology provides fast backups by first identifying changes on the client and then transporting only what has changed.

Reliable: NetBackup Automatic Image Replication (AIR) and highly granular recovery capabilities ensure comprehensive—and fast—disaster recovery (DR) of backup images for DXC customers.

Integrated: Take full advantage of available NetBackup functionality such as Veritas [Information Map](#) (Figure 1) and integration with Veritas [CloudPoint](#)—a new lightweight, flexible, snapshot-based enterprise cloud backup solution that enables single-dashboard visibility into backup operations across storage arrays and clouds.

Cost-Effective: Greater visibility into your backup data gives you greater insight into how best to store and manage that data in order to generate OpEx savings and address GDPR and other regulatory requirements.

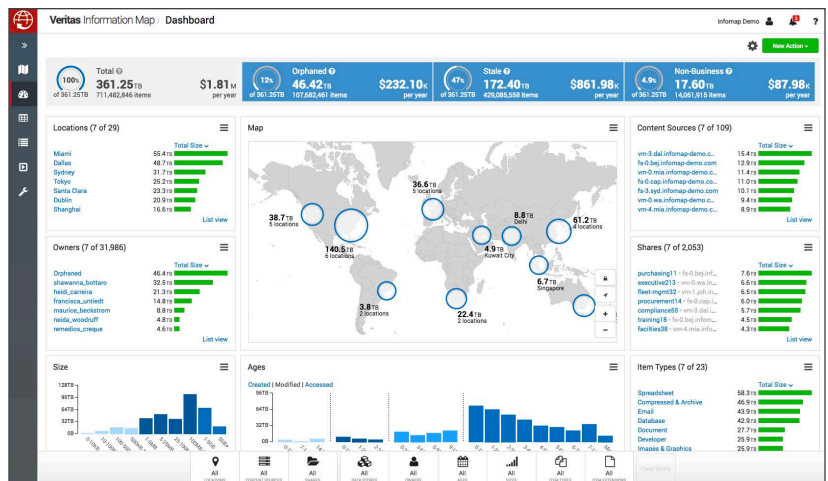

Figure 1: NetBackup offers a range of capabilities, including Information Map shown here, to enable the IT operator to quickly see and understand the entire backup environment.
